	Duration				
Date	(hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
0/07/05		Other	I was going through all the class material an figuring out		
8/27/25	3	Other	what i have to do		
			I was exploring on what I wanted to for my project, As I want this to be more than something just a begginer can		
8/29/25	2	Other	do Its soemthing I have to research deep into		
8/31/25	3	Research, Training, Learning	I decided to create a expense tracker application with possible AI Integration	Ive personally alwasy struggled with tracking my expesnes an i never know where my money goes maybe this process can teach me something about development an my personal habbits	
			Ive worked this after noon Downloading th enecessary		
9/4/25			tools and learning somethings about the tools i will be using.		for me using next js is a bit difficult as its still very new to me
			I was watching yotube videos for npm, next js to get a better understadning for how I am going to make them		
9/5/25	0.5	Other	work		
9/5/25	3	Design	so with the tools downloaded before i can even start coding I need to design the lay out, I decided to come up with some paper sketches on how it should look		This step is actually more difficult than I would have though. I want to make it look neat simple and not to cluttered up
9/6/25	1.5	Other	Ive taken some time to list down the type of features i wanted to include in the core model and what i need to leave out for future models. I realized i needed to be smart with this as too may feature can make it just clutter up		
9/6/25	1	Design	Ive also created a user flow diagram		
9/7/25	3.5	Testing & Debugging	I tried to start coding with the front end, but I ran into an npm and Node.js issue where they weren't connecting properly. The versions didn't match, and I spent a long time figuring out why installs were failing. I ended up reinstalling Node.js and watching multiple YouTube videos before I finally got it working	I have to begin working on my dashboard next	This kind of gave me a little reality check, as a beginner learning the problem itself is actually harder than finding the solution. It quite literllay took me the longest to just understand the error so then i can search for a solution
			Had to do some more trouble shooting an finally I was able	1	
9/7/25	2.5	Coding	to write some code and began working on my dashboard	dashboard	ive made pretty good progress so far i feel
